

STA 104: Take Home Project  
Looking into States that are being affected from Covid-19

## I Introduction

Covid-19 has vastly changed the way of how the world works. Millions of people in America are all unable to do their work properly and have been forced to work at home. We are currently analyzing an data set called CovidA. which lists all the months of states as will as there monthly deaths. We chose to instead subset the dataset and work with 4 states. We chose California, New York City, Florida, and Hawaii. We chose California because that is where my partner and I are located and we would like to know more about California compared to other states. We chose New York City because NYC is a typically very popular spot for visitors and we were curious on how the analysis will work with an heavily populated city with Corona. We chose Hawaii because despite the fact that is an very famous spot for tourists, people have not been going there because of heavy fines indicted by the government of Hawaii, which leaves us curious on how they have been reacting to Corona deaths. We also chose Florida largely because it is one of the only states where nobody believed in the Coronavirus. All the bars, indoor dining and tourism is rampant over there with the state not caring if anyone wears a mask. We are curious on how Florida is doing in terms of the virus compared to states that are very progressive and strict on guidelines such as California and Hawaii.

## II Summary of Data

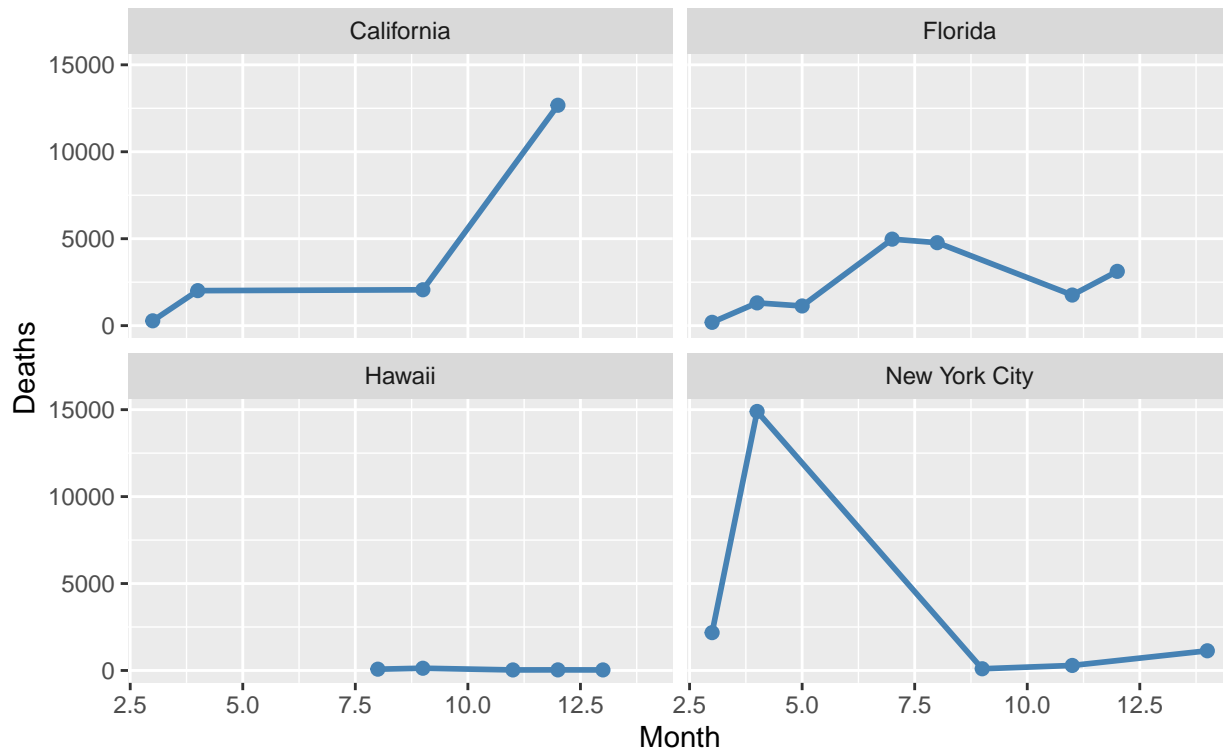

Table 1: Summary Statistics

	California	Florida	Hawaii	New York City
Group Mean	4256.750	2465.00000	59.40000	3718.200
Group SD	5673.232	1863.53750	42.52999	6302.866
Rank Mean	14.250	13.71429	3.20000	12.400
Sample Size	4.000	7.00000	5.00000	5.000
